

CS 113 – Computer Science I

Lecture 16 – Sorting

Adam Poliak

11/03/2022

Announcements

- Assignment 08
 - Due tonight Thursday 11/10

Guessing game – in class exercise

Pair up:

- Person A chooses a number between 1 and 64
- Person B guesses the number
- Until the guess is correct:
 - Person A tells whether the guess is too high or too low
 - Person B guesses again

After 2 rounds each, choose a number between 1 and 512

Binary Search run time

As the size of our collection increases, the number of guesses/comparisons increases, but not *linearly*

The time increases by $\log n$ (we use base 2)

If our collection contains 8 data points, how many comparisons in worst case do we make:

$$\log_2 8 = 3$$

If our collection contains 512 data points, how many comparisons in worst case do we make:

$$\log_2 512 = 9$$

Sorting

Bubble Sort

Compare two adjacent items, and swap if needed

Repeat until largest item is at the back

Repeat process until done

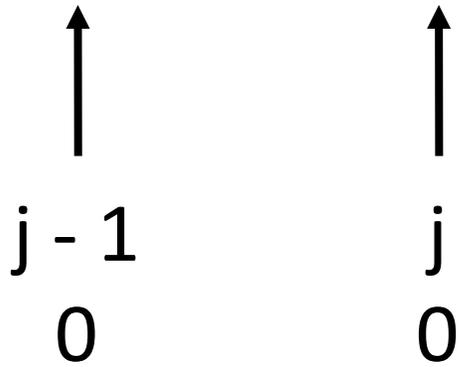

Bubble Sort

0	1	2	3	4	5
10	4	3	0	11	8

What do we do first?

Bubble Sort

len = 6

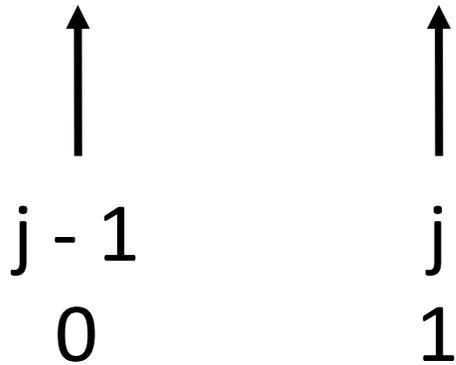

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

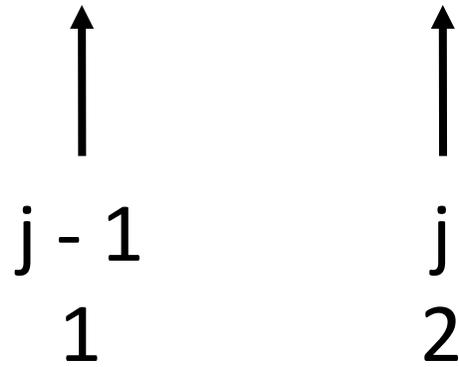

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

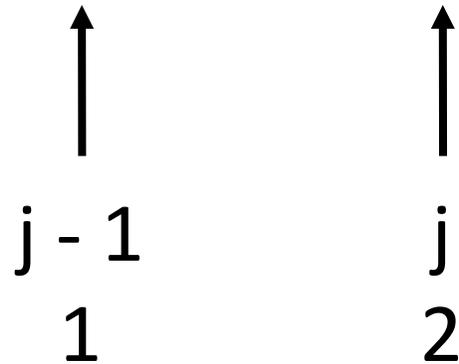

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

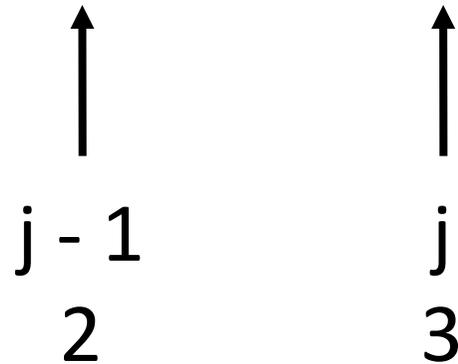

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

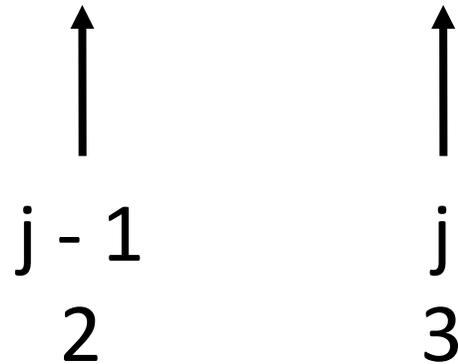

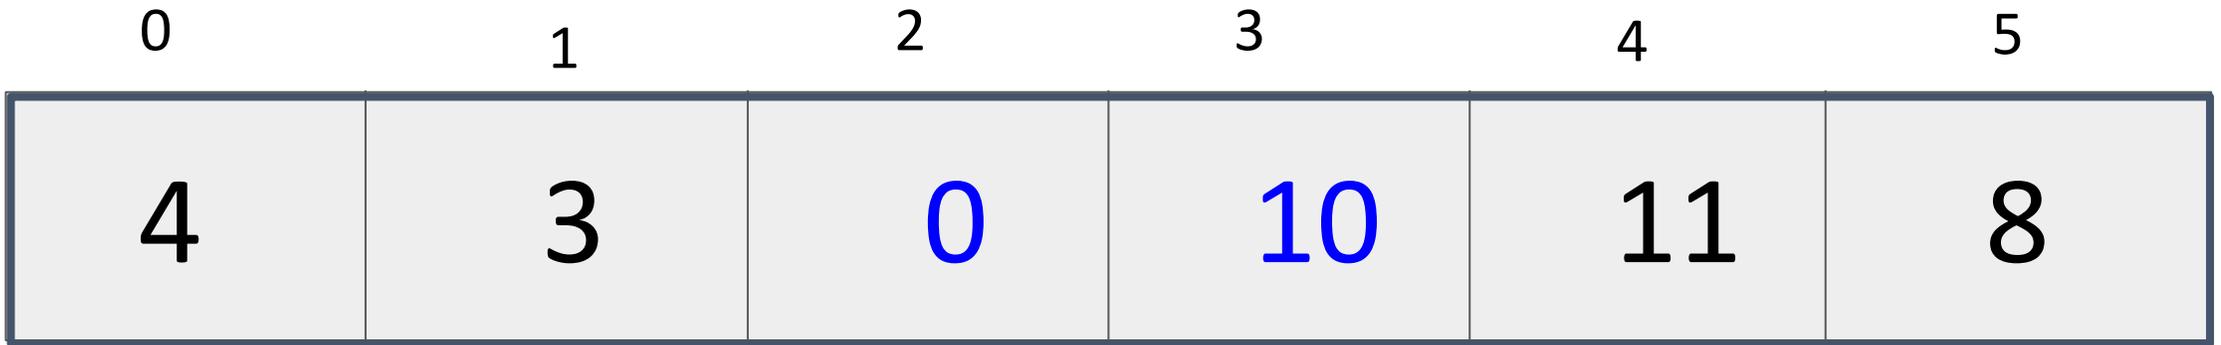

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

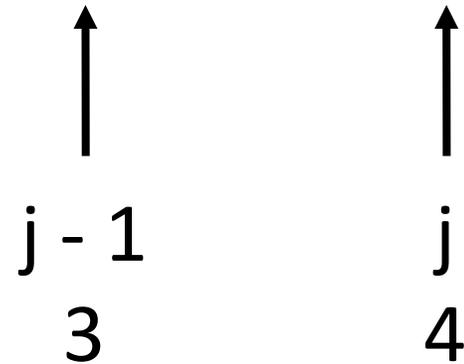

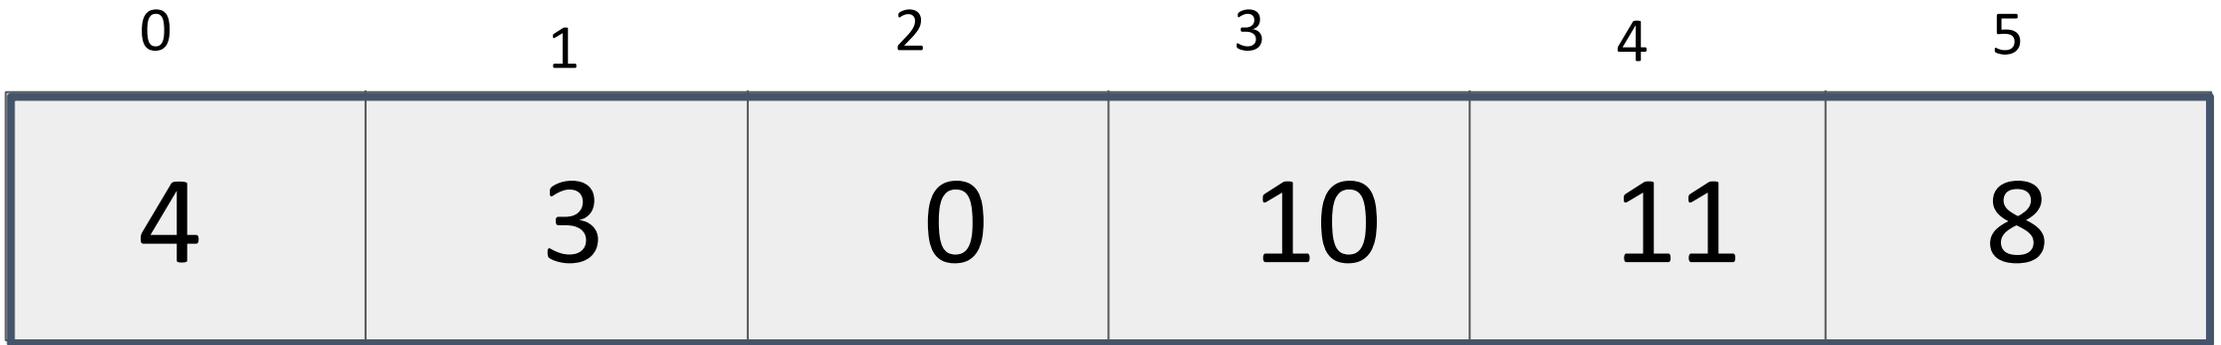

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

↑
j - 1
4

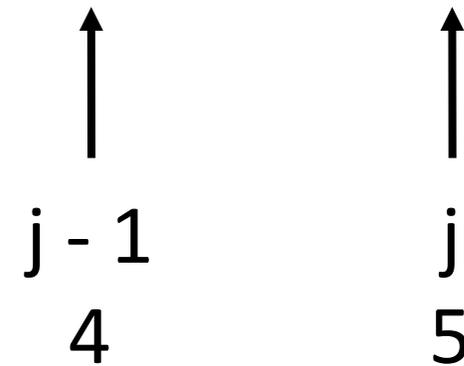

↑
j
5

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 6

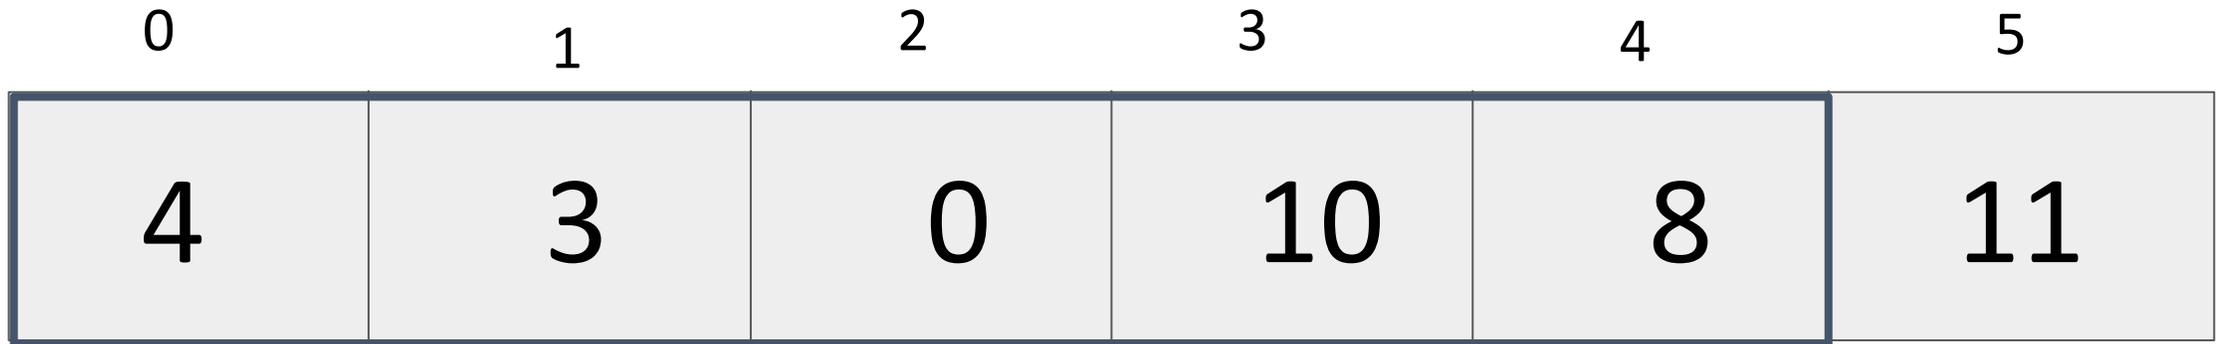

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

↑
j - 1
0

↑
j
1

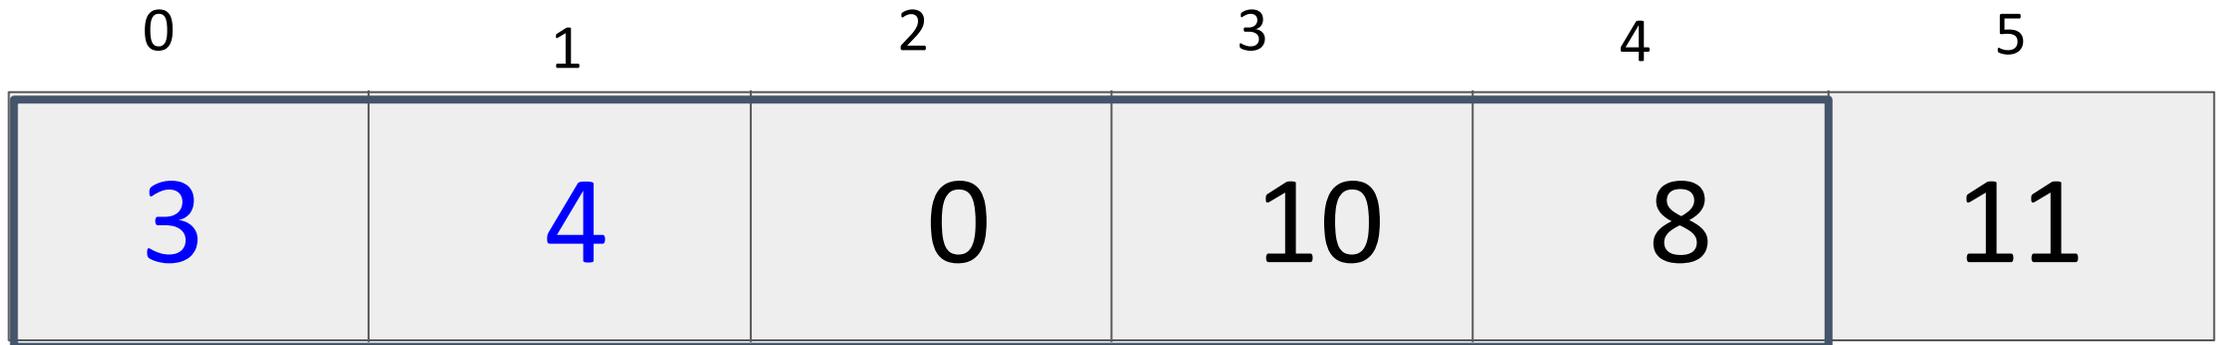

Last element has
largest element!

Reset and compare pairs with shorter list!

What next?

Bubble Sort

len = 5

↑
j - 1
0

↑
j
1

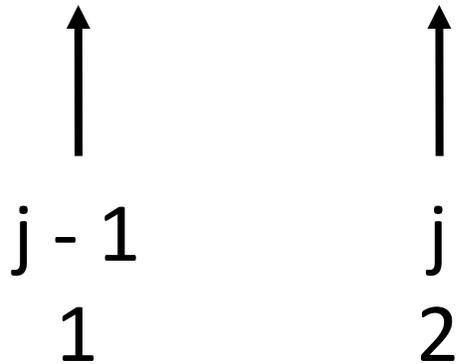

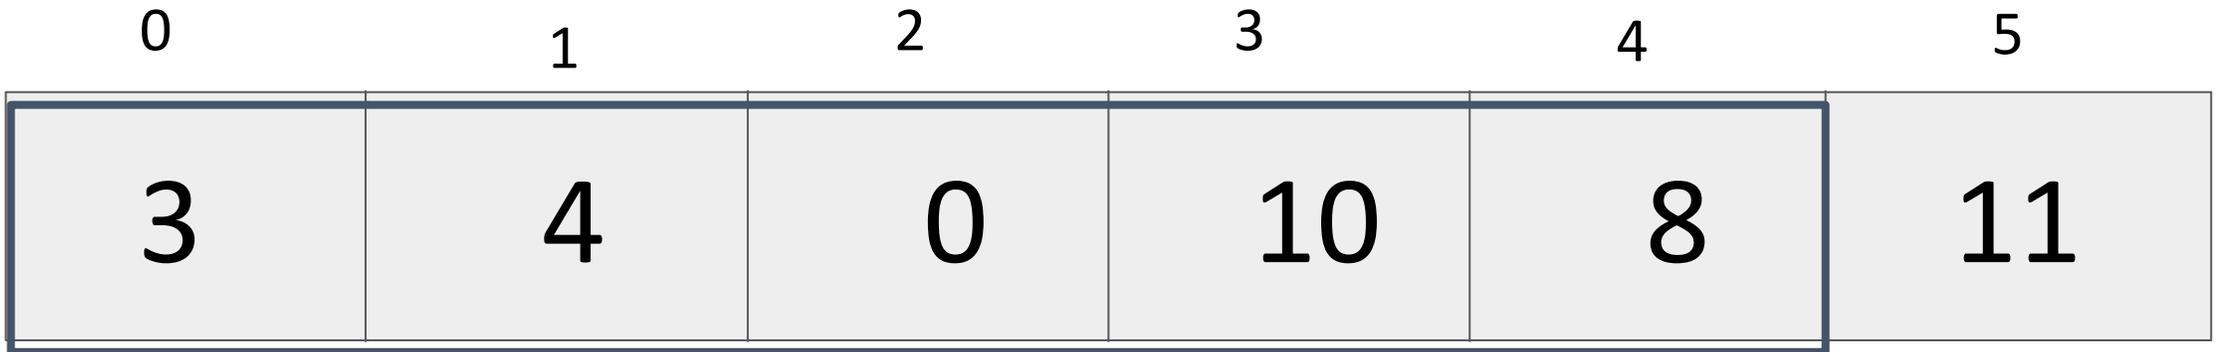

Last element has largest element!

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

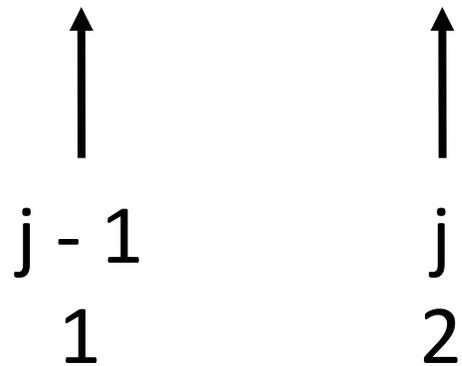

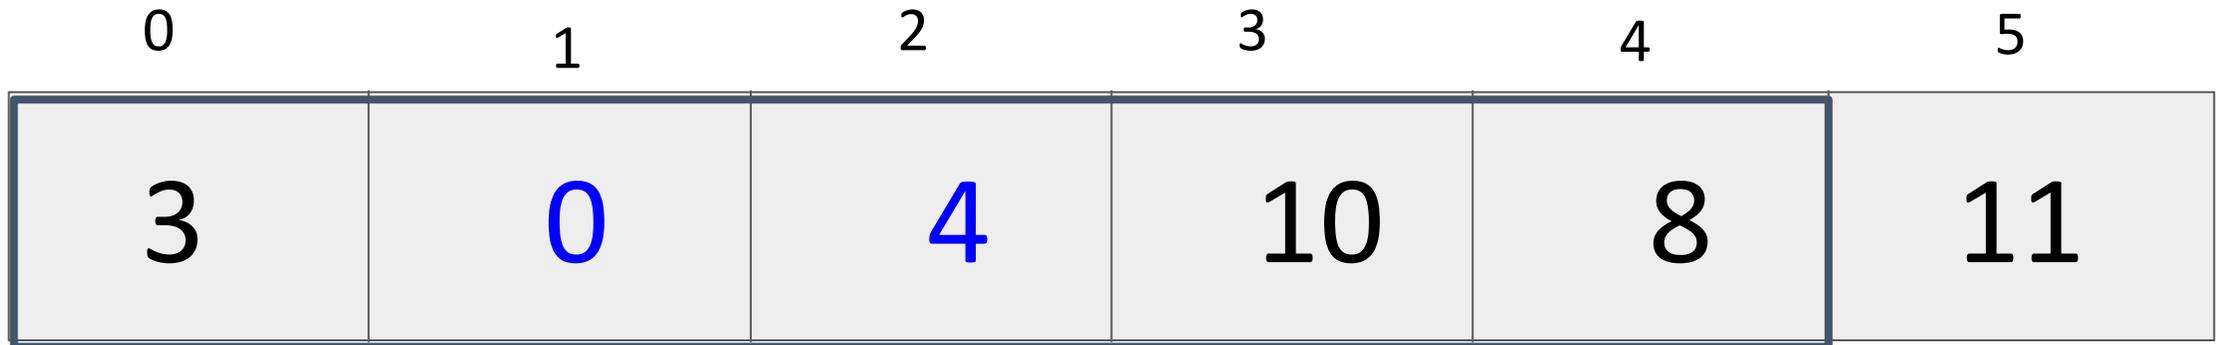

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

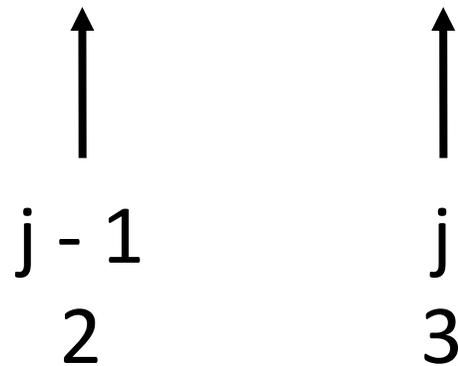

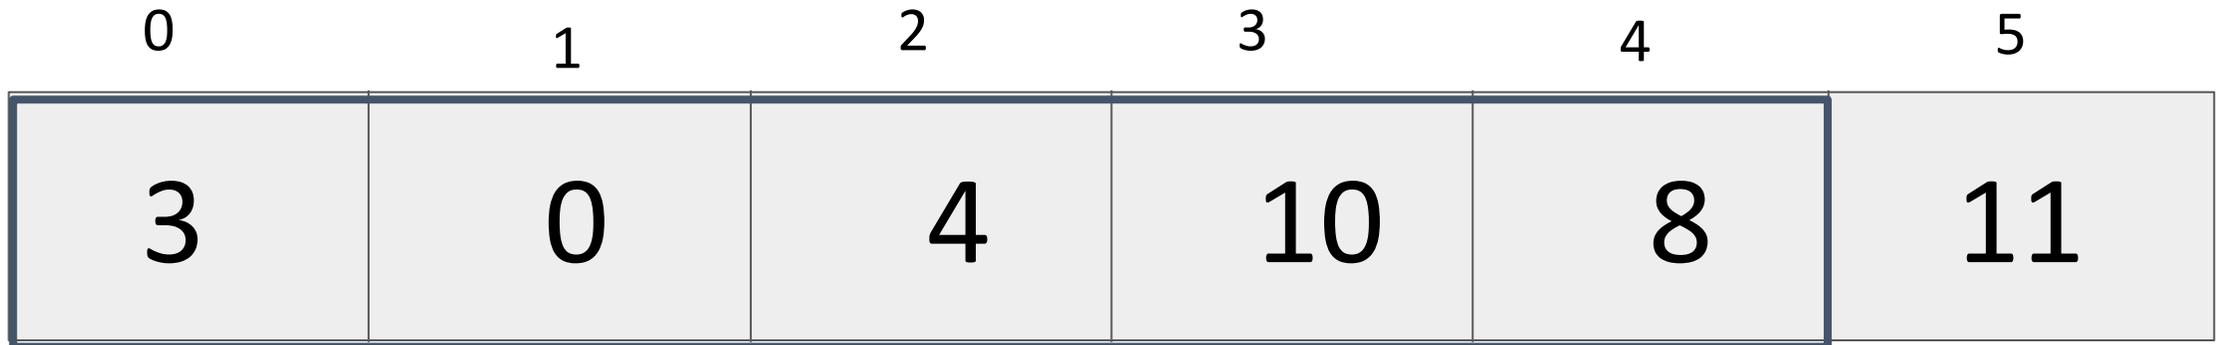

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

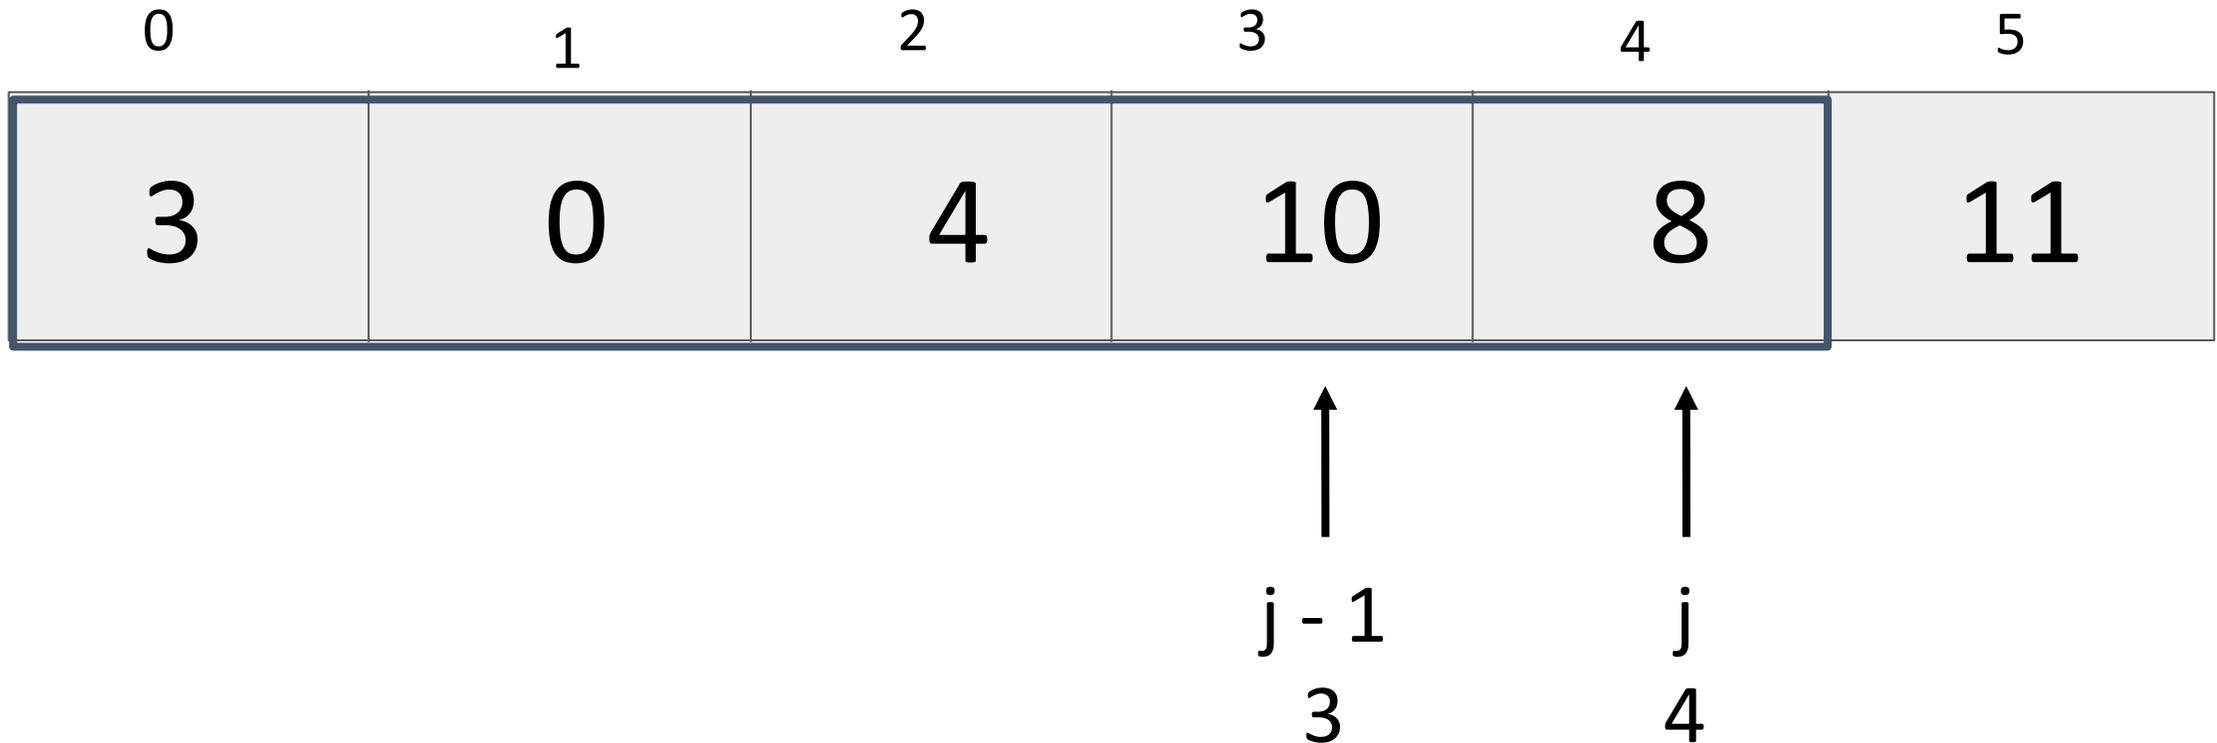

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

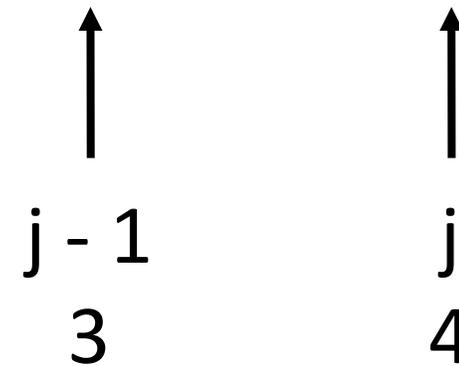

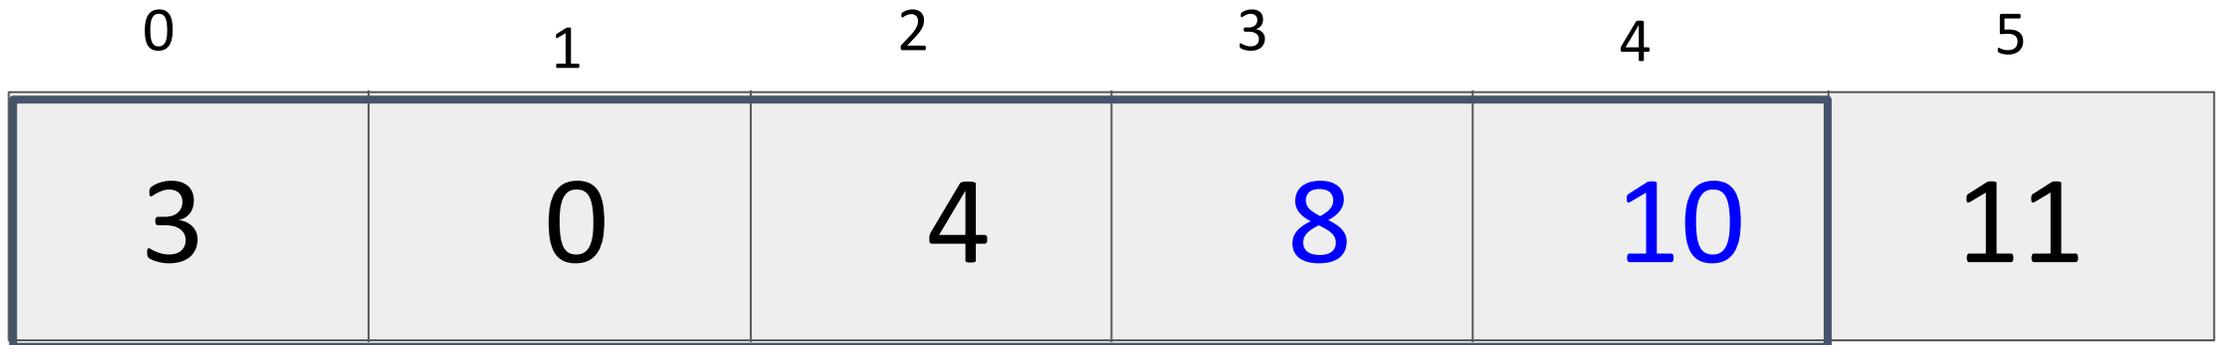

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 5

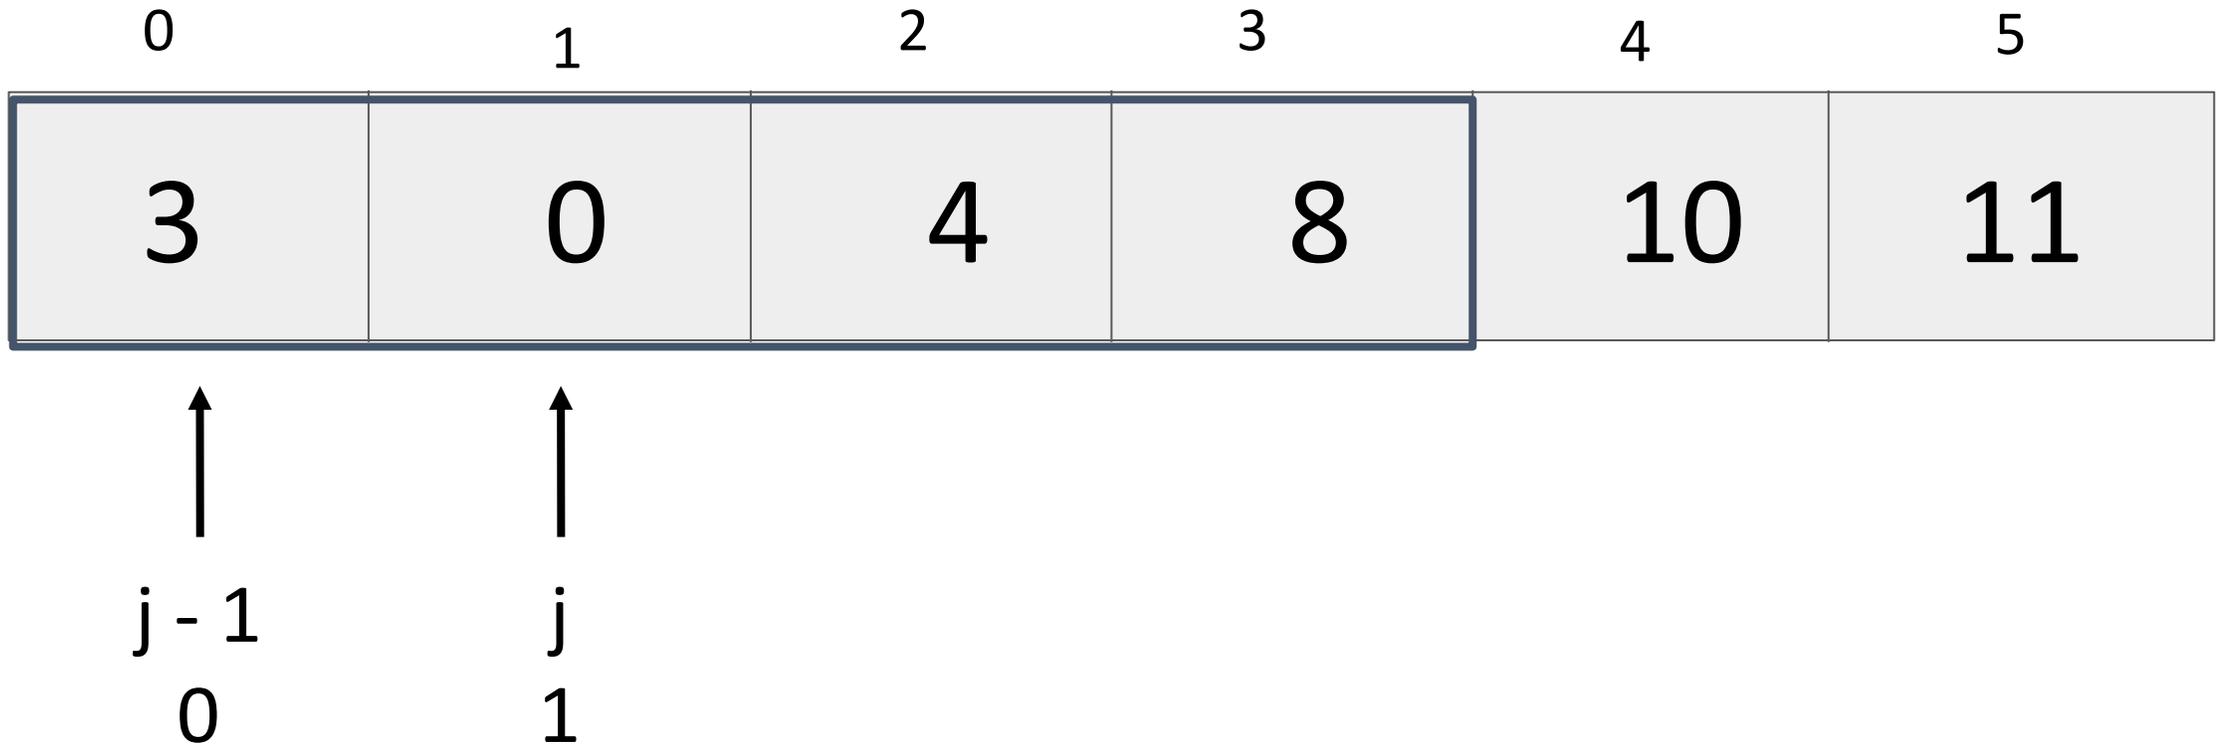

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 4

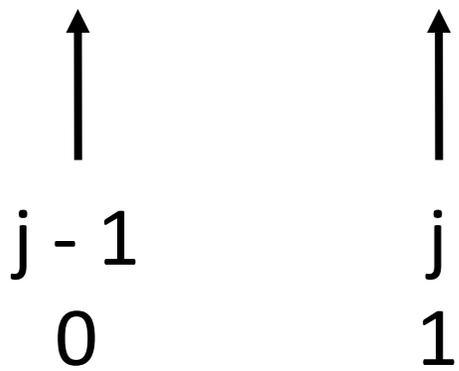

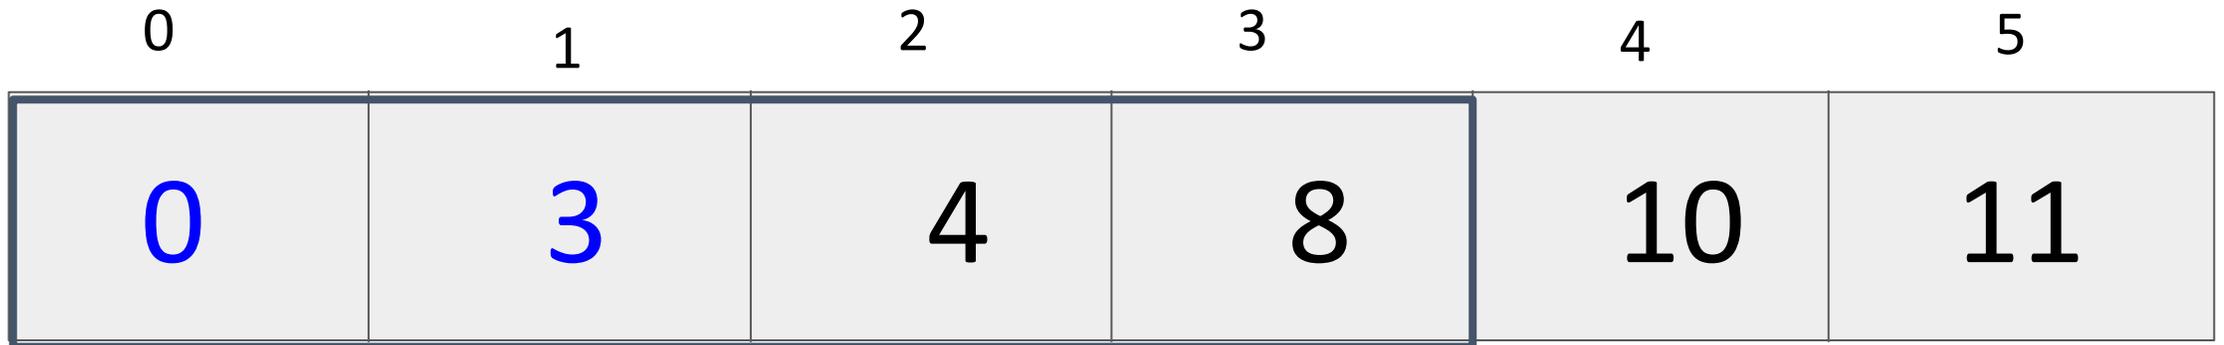

Reset and check pairs with shorter list

What next?

Bubble Sort

len = 4

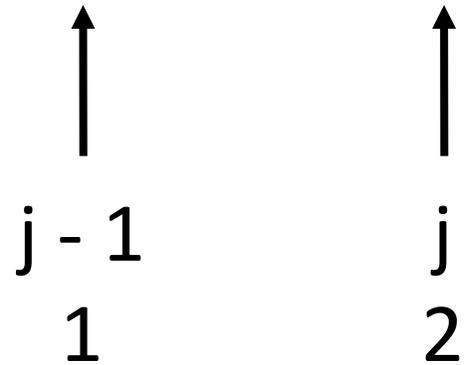

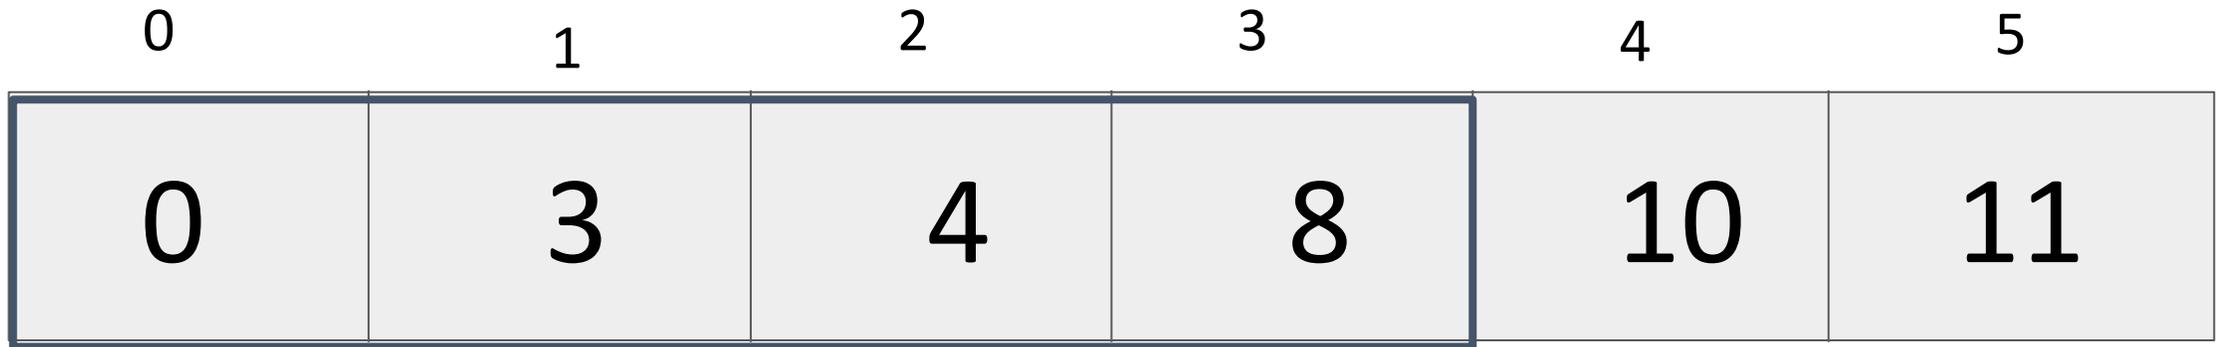

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 4

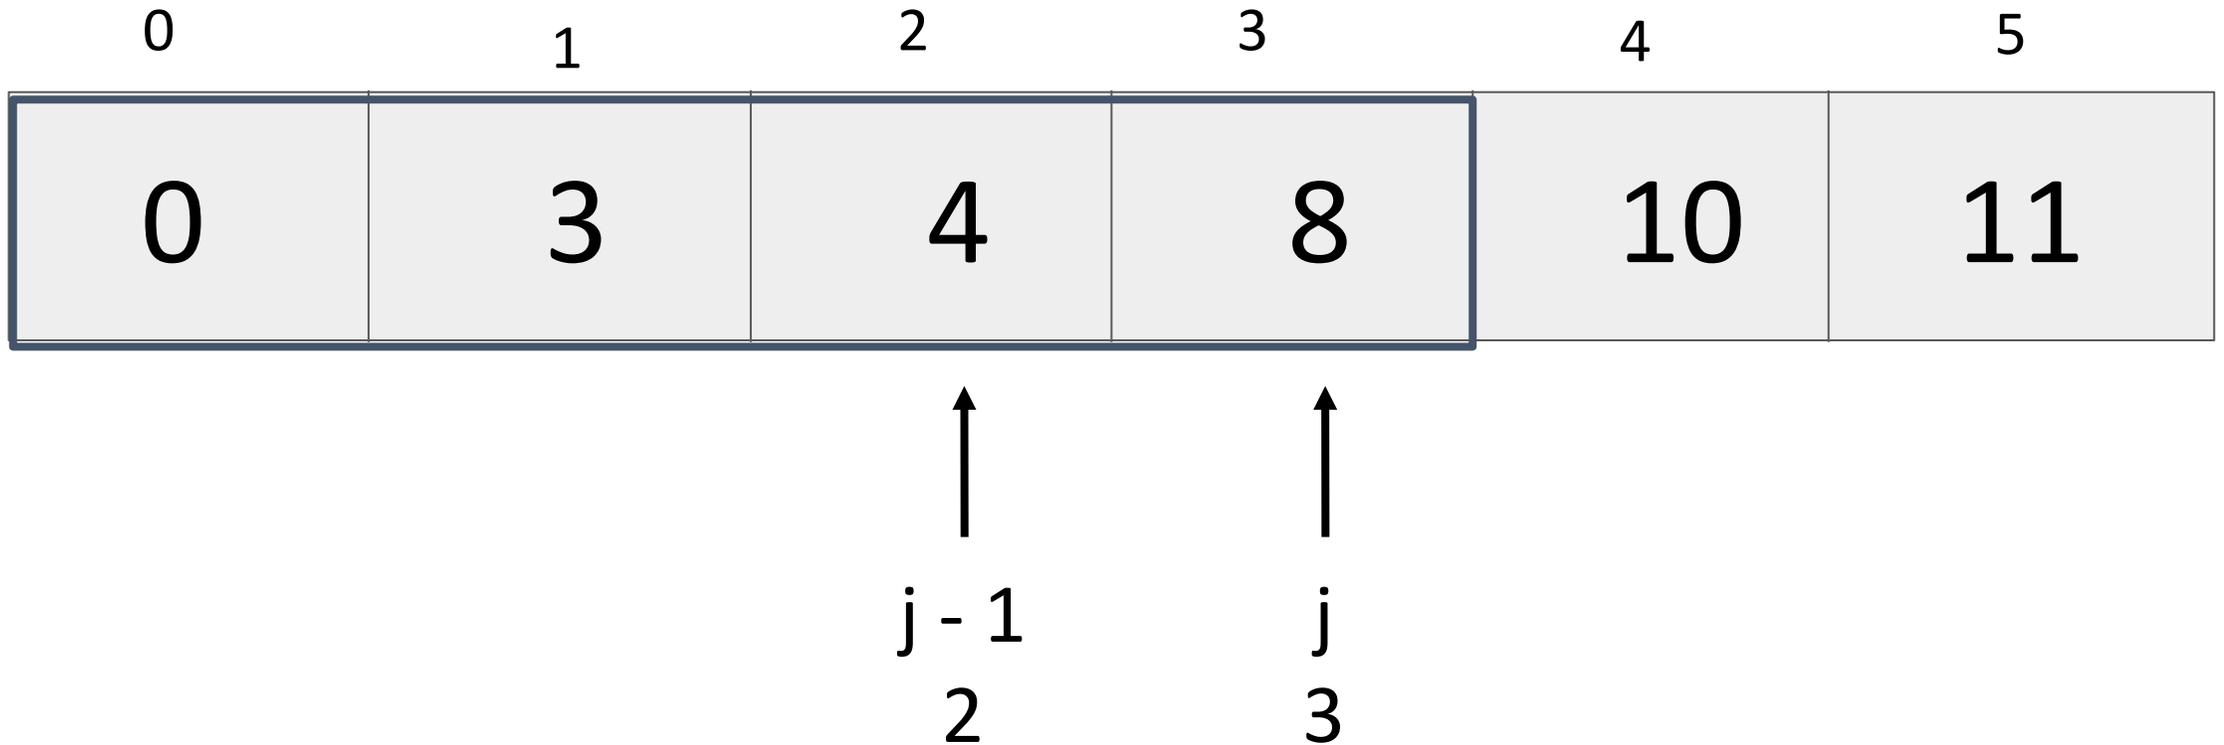

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 4

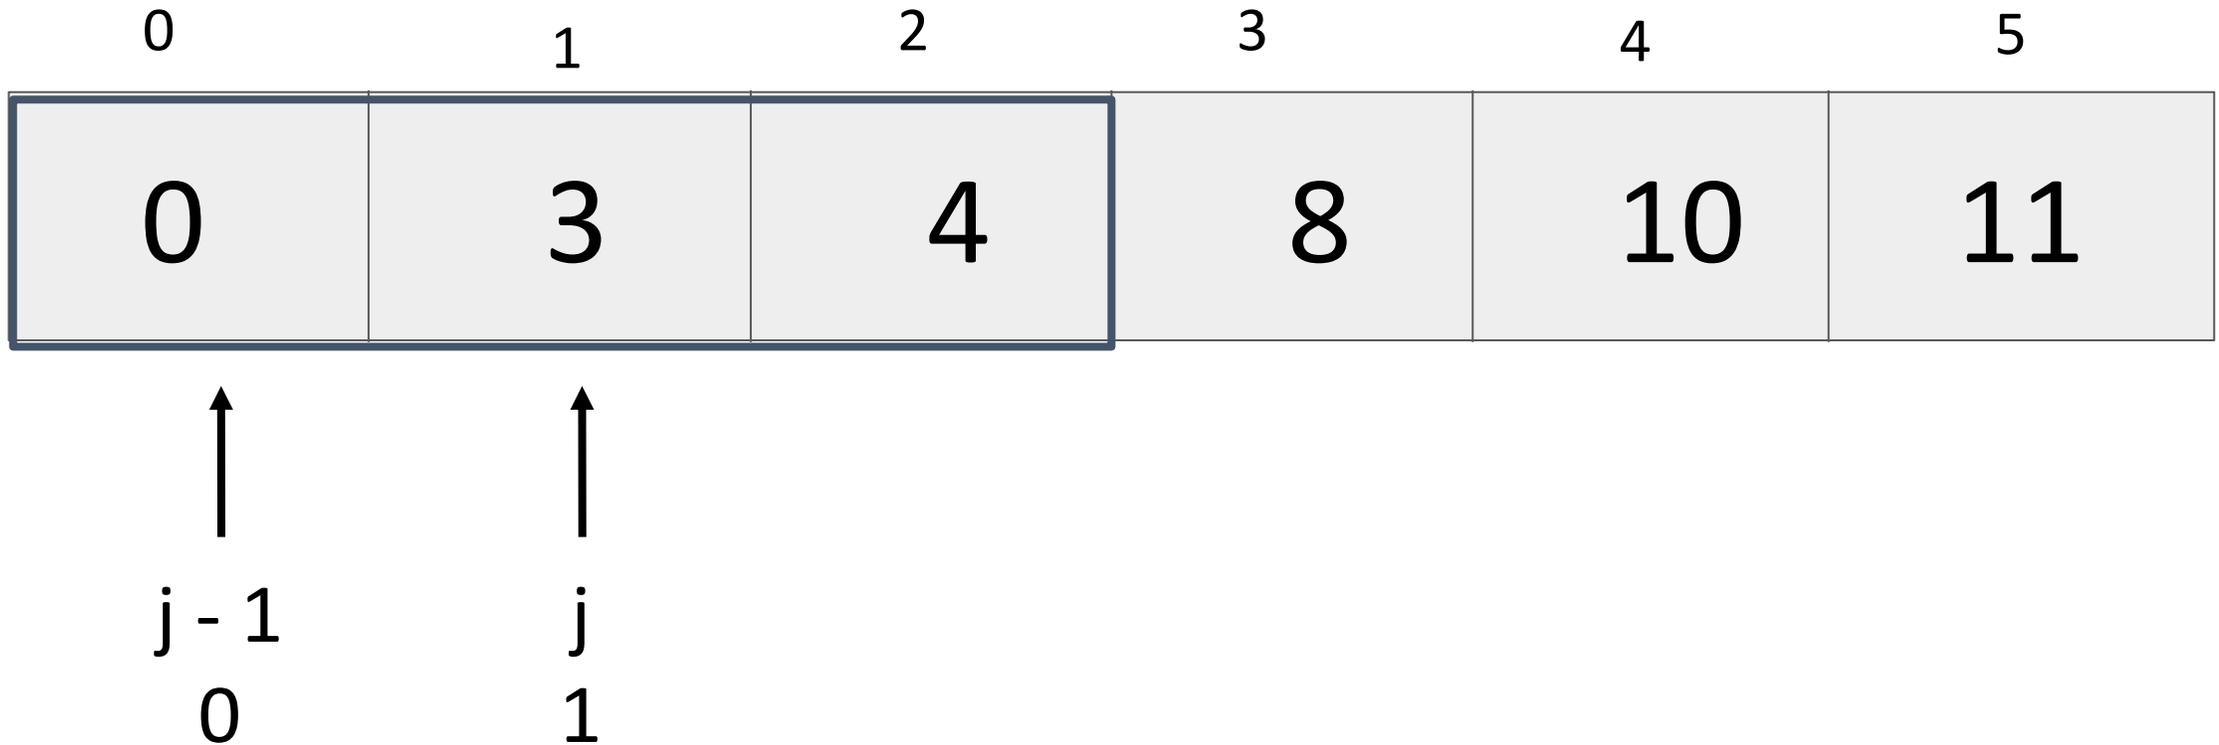

Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 3

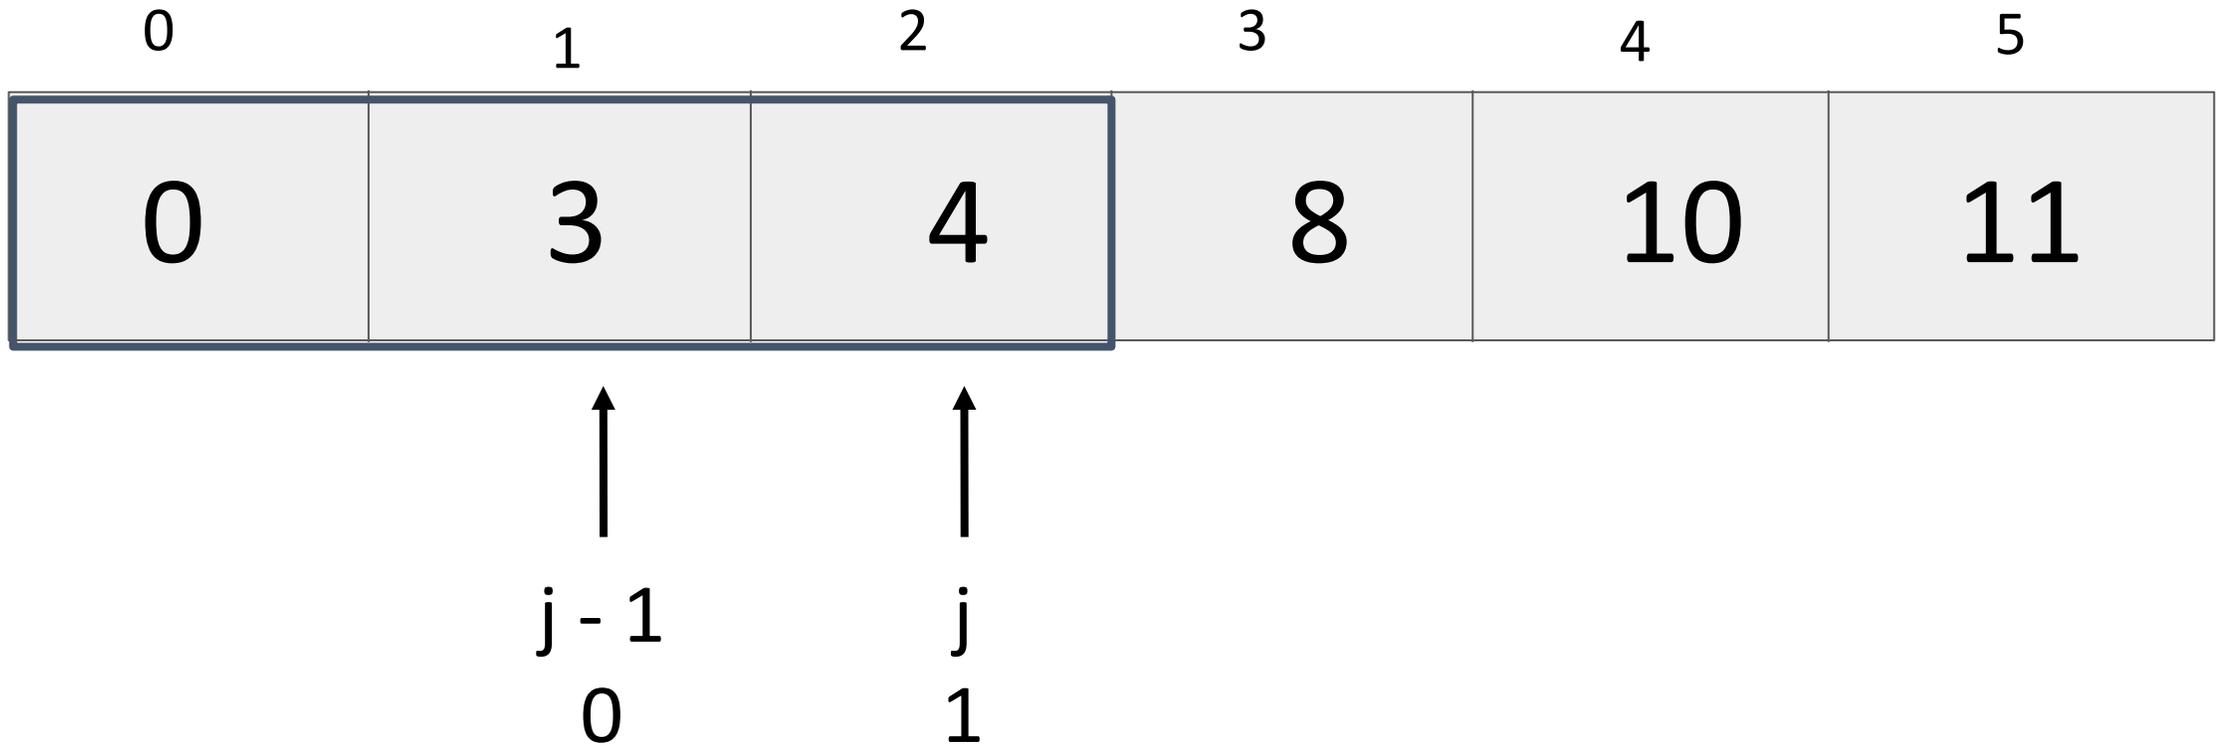

Reset; Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 3

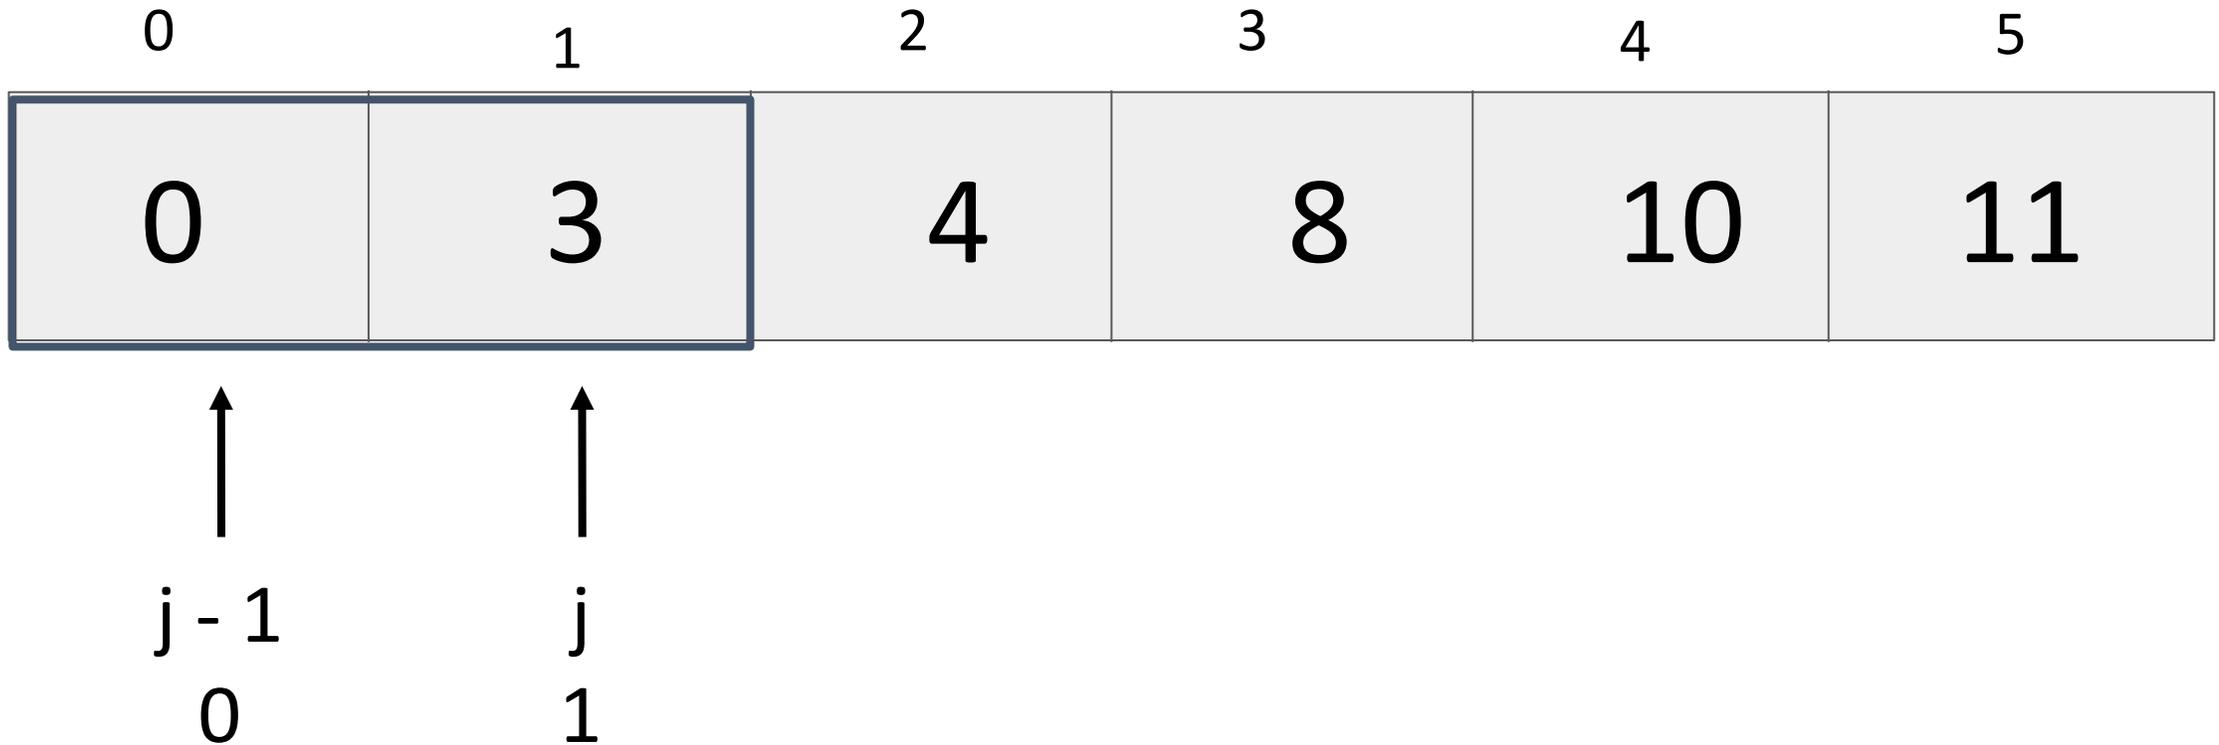

Reset; Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

len = 2

Reset; Compare $j-1$ and j ; Swap if $L[j-1] > L[j]$

What next?

Bubble Sort

Idea: bubble highest values to the end of the list; Check a shorter sublist each time

`bubbleSort(L):`

```
    for len in range(len(L), 1, -1):  
        for j in range(1, len): # bubble  
            if L[j-1] > L[j]:  
                swap(j-1, j, L)
```

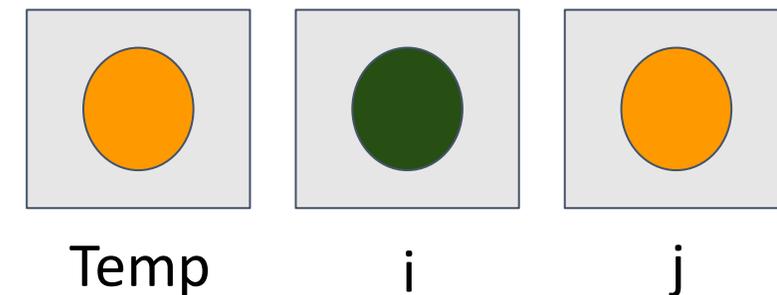

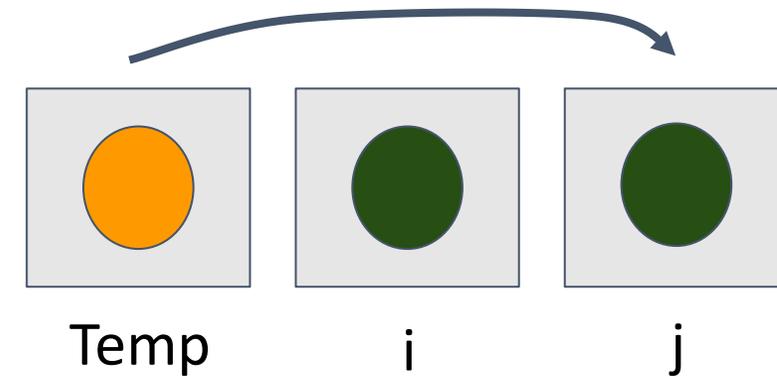

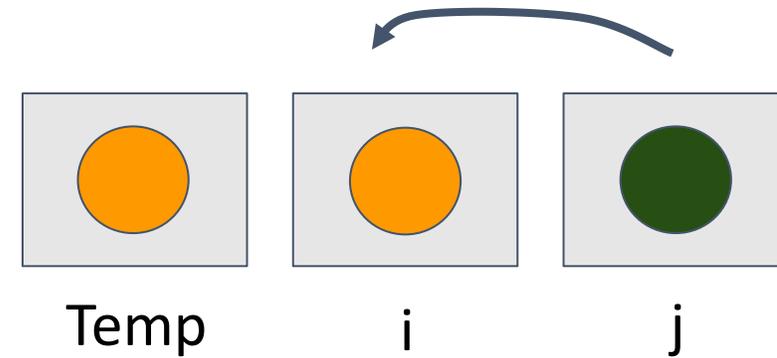

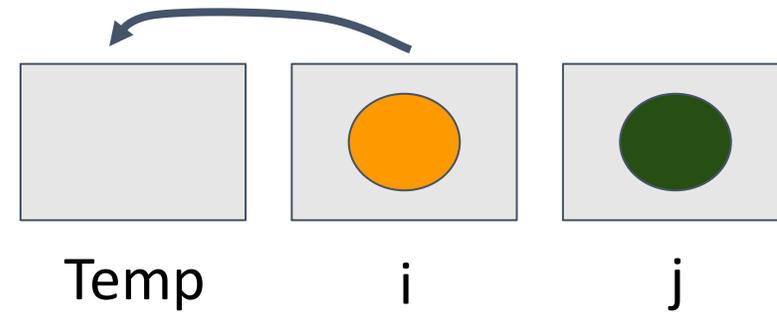

Bubble sort

swap(i, j, L):

temp = L[i] # step 1

L[i] = L[j] # step 2

L[j] = temp # step 3

Selection sort

Repeatedly find the smallest item and put it at front of list

selectionSort(L):

 for startIdx in range(len(L)):

 minIdx = findMinimum(startIdx, L)

 swap(startIdx, minIdx, L)

Selection Sort

0	1	2	3	4	5
10	4	3	0	11	8

What do we do first?

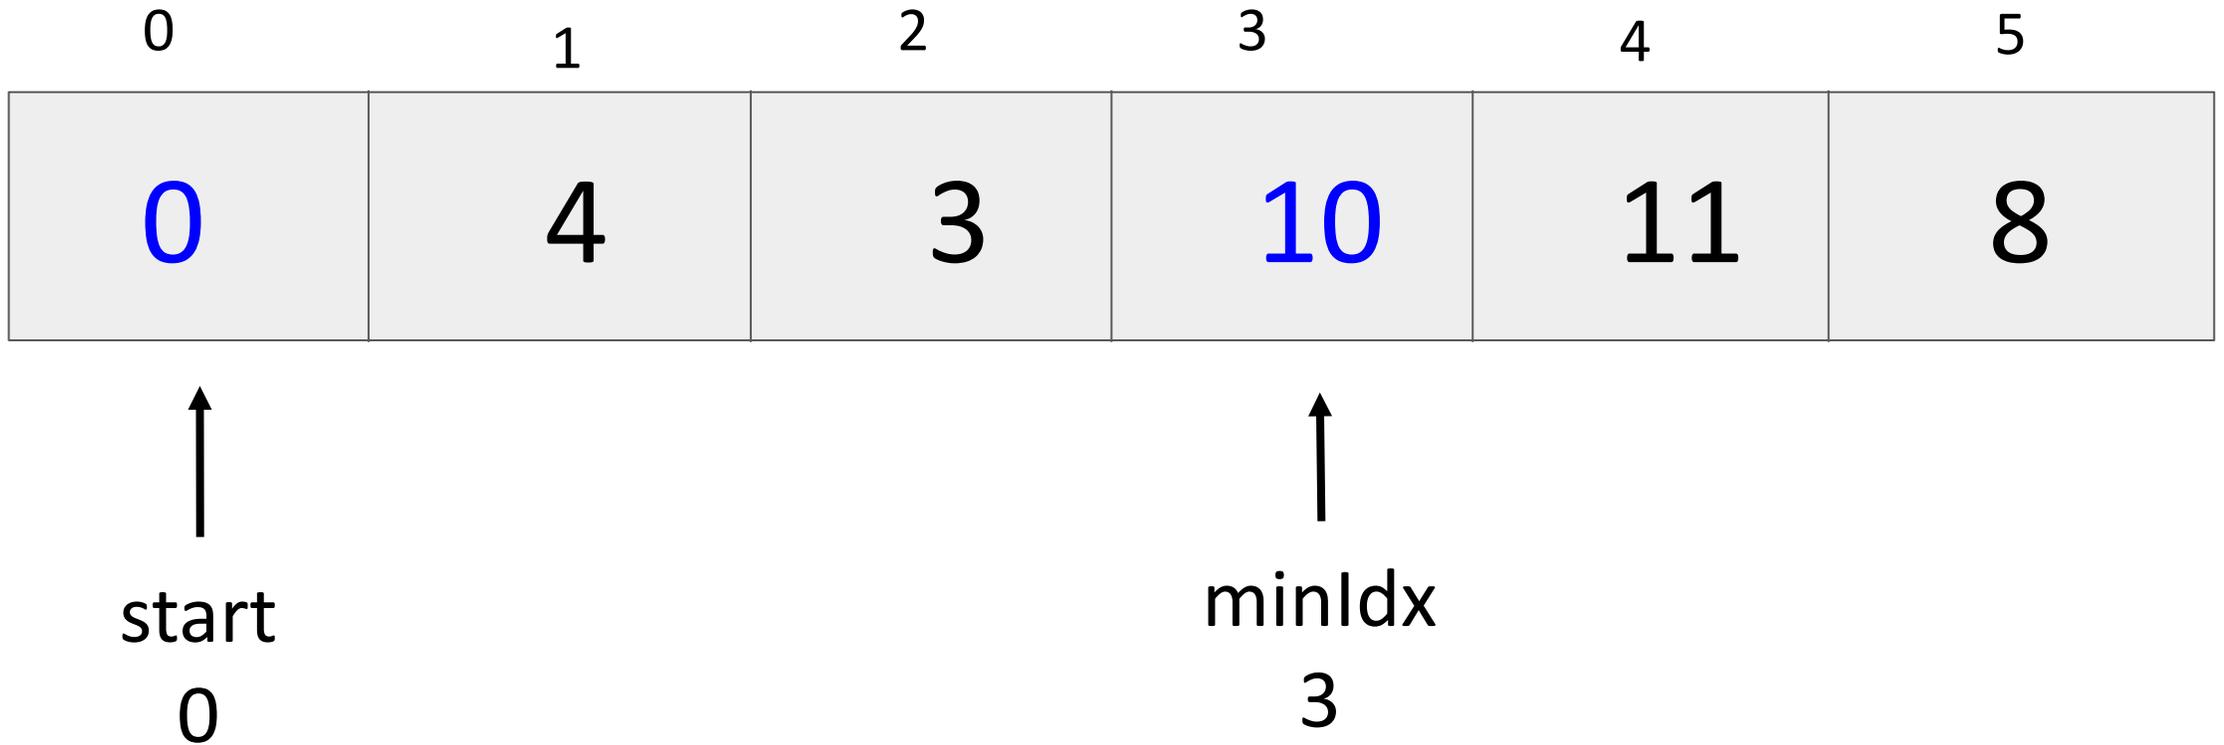

Selection Sort

Find minimum element idx between start to end

What next?

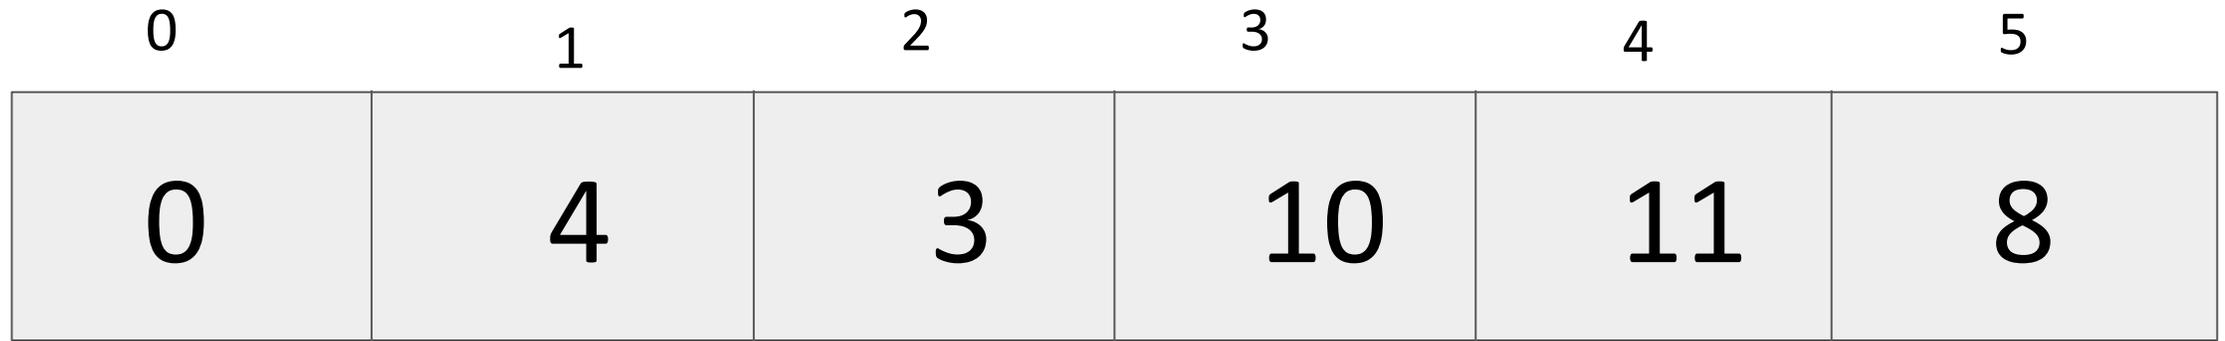

Selection Sort

Swap the elements at start and minIdx

What next?

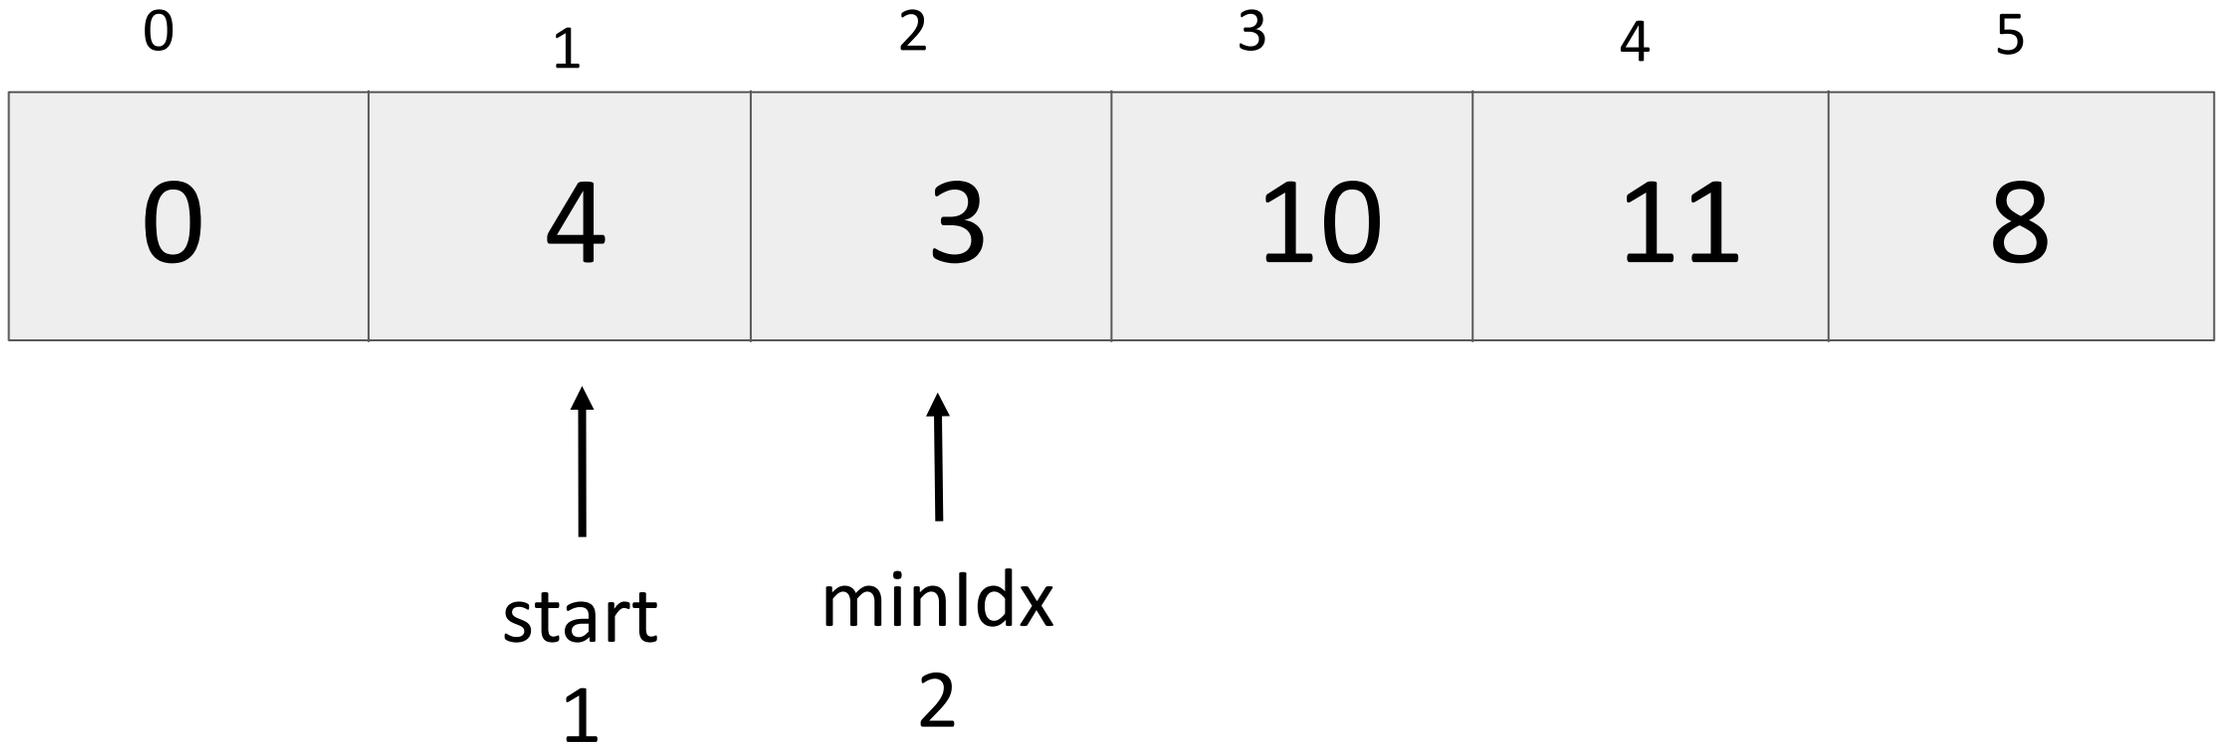

Selection Sort

Decrease the interval.

What next?

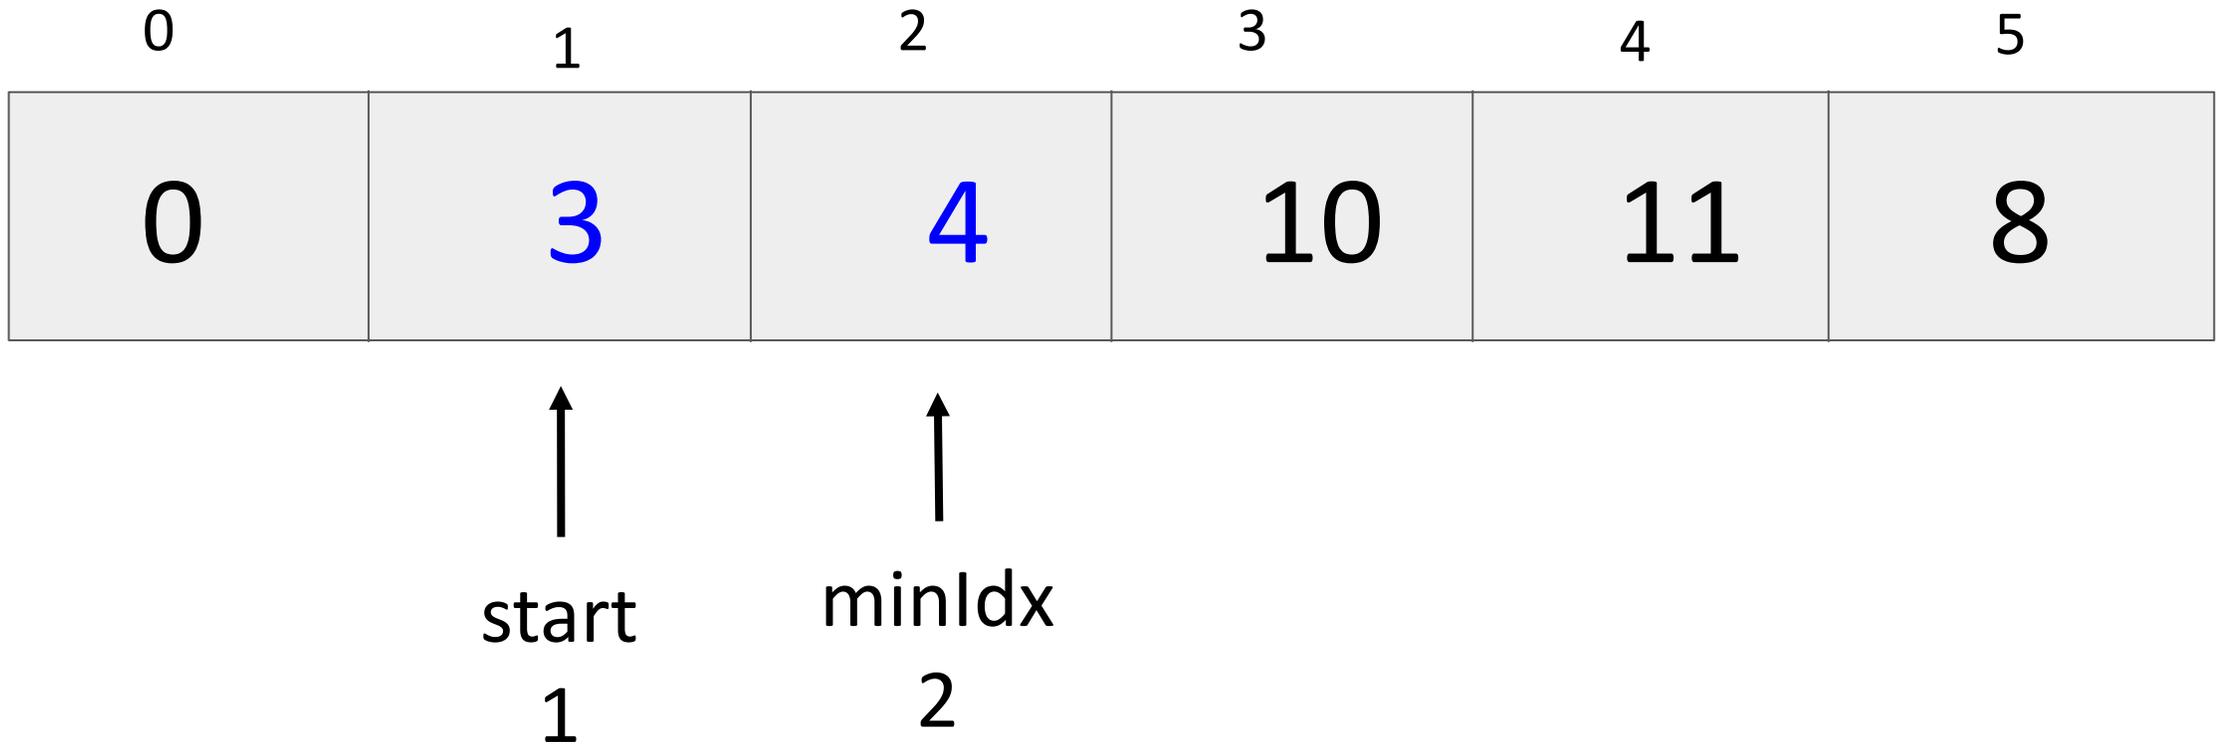

Selection Sort

Find minimum element between start to end

What next?

Selection Sort

Swap the elements at start and minIdx

What next?

Selection Sort

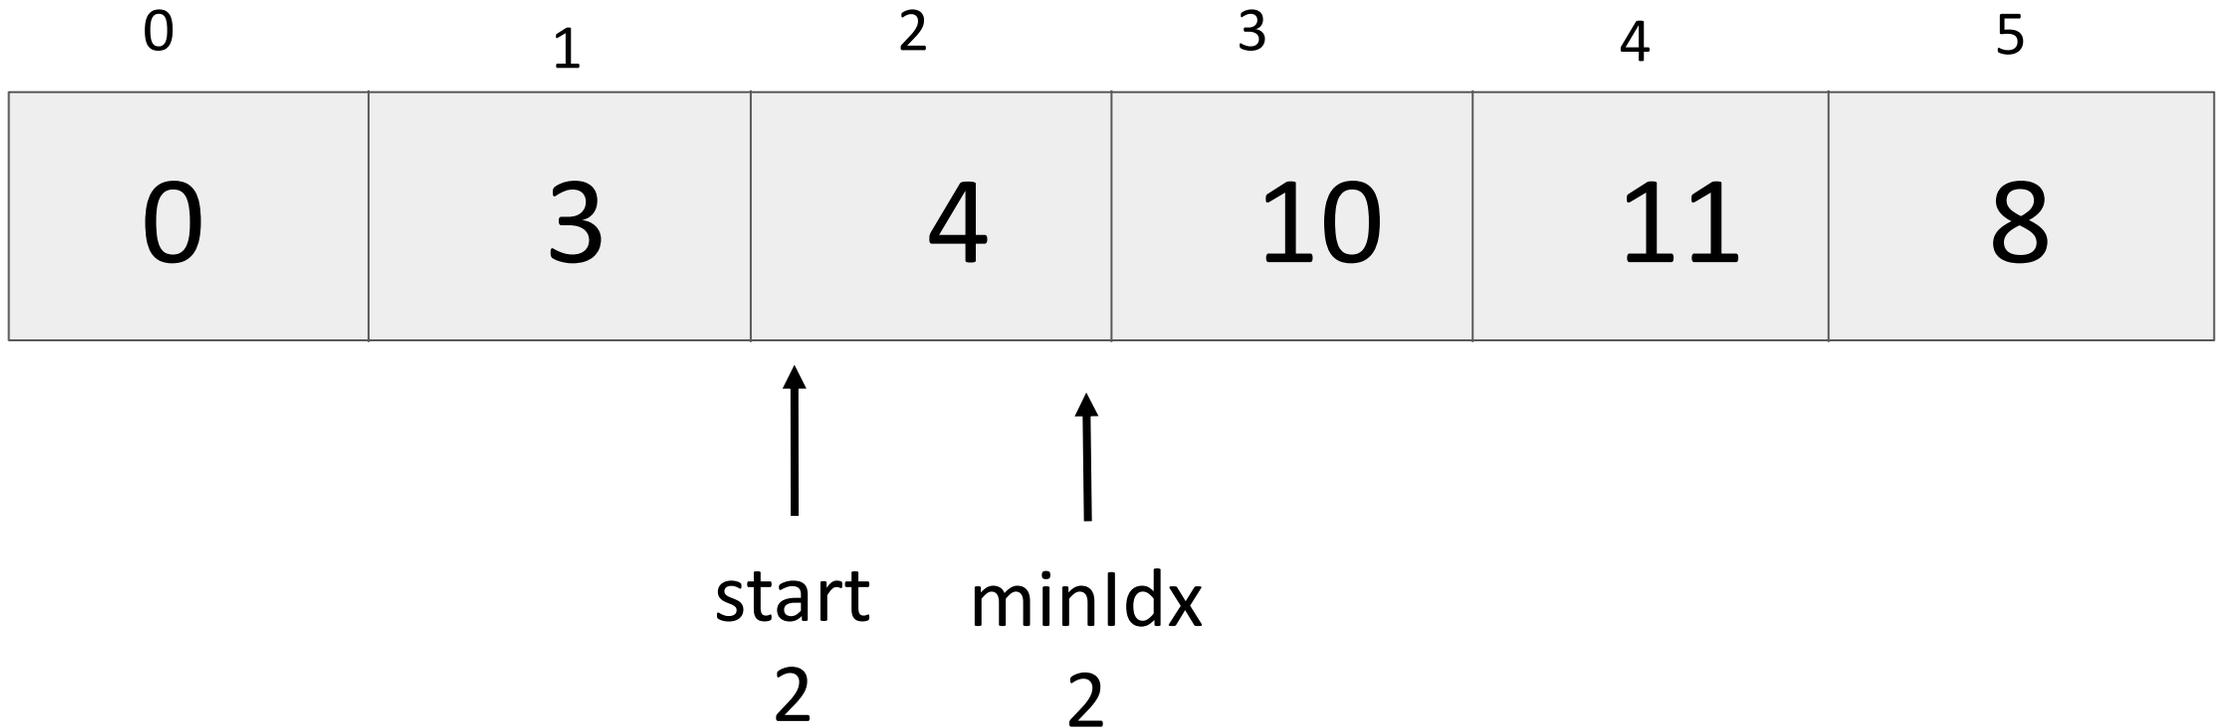

0	1	2	3	4	5
0	3	4	10	11	8

↑
start
2

Decrease the interval.
